

# Contributor Dataset QA Guide

Purpose: verify seeded exam records before student release or model training.

## Review steps

1. Enter your reviewer name before saving any decision.
2. Select the past exam year in Dataset QA.
3. Open the first Ready for QA record in the queue.
4. Compare the rendered question with the original exam or trusted source.
5. Check marks, topic, subtopic, answer type, and manual-review flag.
6. For auto-check questions, run the marker using the expected answer.
7. Read the worked solution and marking rubric for accuracy and clarity.
8. Save a decision: Approve, Needs Fix, Manual, or Reject.
9. Write a short reviewer note explaining what you checked.

## Status rules

Approve: question text, answer, solution, rubric, topic, and marker are correct.

Needs Fix: the record is useful but contains a correctable problem.

Manual: graph, proof, explanation, or non-machine-markable item needs human review.

Reject: the record is too wrong, duplicated, incomplete, or unsafe for the dataset.

# Golden example: 2025 Exam 1 Question 1a

Question: Let  $y = x^2 \cos(x)$ . Find  $dy/dx$ .

Topic: Differentiation rules

Subtopic: Product rule

Marks: 1

Expected answer:  $2x \cos(x) - x^2 \sin(x)$

How to review this example

1. Open VCE\_MM\_EXAM1\_2025 in Dataset QA.
2. Select Question 1a.
3. Confirm the rendered question reads: Let  $y = x^2 \cos(x)$ . Find  $dy/dx$ .
4. Confirm the answer field contains  $2x \cos(x) - x^2 \sin(x)$ .
5. Paste that same answer into Answer test and run the marker.
6. Confirm the marker result is Correct with score 1 / 1.
7. Confirm the rubric says the product rule derivative is correct.
8. Save status as Approved.

Reviewer note example

Checked against source. Expected answer marks correct. Product rule topic is correct.

Do not approve if any part is inconsistent. Use Needs Fix and describe the issue.
